Executive Summary

Client Problem (Driving Question)

Kate Smith is a single parent who lives in the Oklahoma City area. Kate lost her job at the GM plant. Since losing her job, Kate has three other jobs. She is now in a stable with a job at a local manufacturing business. However, Kate is not making as much money. While working at GM, Kate used to take her and her three daughters to the state fair. Since losing her job, they have not been to the state fair. She really wants to take the girls this year. The girls are teenagers and Kate wants to do as much with them before they graduate. She heard we may be able to help her go to the fair on her limited budget. She has $150 that she can spend.

Driving Question: How can Smith make the most of her $150 budget for the state fair?

General Information

A key part to helping Ms. Smith is to know the charges associated with the state fair. Below are websites that provide detail to the cost of the state fair:

http://www.okstatefair.com/tickets_promotions.asp

http://okc.about.com/od/attractionsandevents/p/okstatefair.htm

Products/Due Dates

Below are the items that must be completed to provide a proper client solution. The items with an asterisk (*) must be turned into the actual client. The remaining items are required to produce the client product. Each item is a grade. All team members get the same grade for each item below.

Project Action Plan-September 11
This is the form that details items to be completed, the person on the team to complete them and due dates. Consistent duties include research, math checker, mathematician, client solution document.

Graph(s)-September 14
This is the graph(s) that will be included in the client solution.

Client Solution-September 16*
This is the document (Word or Powerpoint) that the must be turned into the client. It must contain a graph that shows at least three possibilities and explanation of what is the best choice.
